

Southern Thoughts Business Technology Consulting Product Description

Southern Thoughts offers Business Technology Consulting across a wide range of areas. The degree of expertise that can be applied is both deep and wide (see the Colleague List). Southern Thoughts can consider projects across the spectrum of business activities. However, Southern Thoughts will not take on projects unless the required expertise is available to accomplish the work.

Southern Thoughts takes a "Business First" approach to Technology. We see business as business and technology as just a tool, a potentially powerful tool but a tool none the less. Technology must constantly demonstrate a positive effect on the bottom line to have a place in business.

Southern Thoughts maintains special relationships with a large number of "Associates". These Associates can be called upon to provide information and perspective not available to many.

Contact Robert to see if Southern Thoughts Business Technology Consulting is a good fit for your situation.
