

Southland Automation Inc. StPicture Family Photo Storage System Computer Recommendations

The StPictureFamily Photo Storage System should run on any computer running Windows 98 or later. However for acceptable performance a 300mhz or faster processor with 32mb or more of RAM and 80mb or more of free disk space is recommended.

The computer will need a CD Reader to install the product from the delivery CDs.

The computer will need to be "sound capable", with speakers and a microphone, to take advantage of the Audio features of the product.

The computer will need a CD-R, CD-RW, or some other high capacity removable storage device in order to share the pictures.

A source of pictures will be required. This can be a digital camera or a scanner. The StPicture system does not run these devices, the manufacturers provide software for getting pictures from these devices to the computers hard disk drive. The StPicture system picks up the pictures from there.
